Purpose:
The purpose of this policy is to outline the university’s parameters and expectations related to COVID-19 immunization for students who will be living in residence, including the tracking of vaccinations received and the process for those who do not intend to be vaccinated.

This policy aligns with our values and endeavours to balance protecting the common good during the COVID-19 Pandemic, while recognizing that a small number of individuals will not be immunized for specific reasons.

Requirements:

• Students were required to disclose their vaccination status during the month of July.
• Students are required to follow through on their indicated status, including getting their second dose, where they indicated an intention to do so.
• As soon as a student’s declared vaccination status changes, they are required to update their individual record through the Student Residence and Dining Portal.
• A student’s declared status must be current, within a maximum of 2 days prior to their move-in date.
• Students who indicate that they do not intend to be vaccinated are required to sign an attestation as to the reason they are not being vaccinated (medical, religious, personal choice). The attestation must be submitted by August 30, 2021. Those who indicate medical or religious reasons for not getting vaccinated may be required to provide additional supporting information/documentation; those who indicate their reason is personal choice will be required to complete an education process about the value, risks and effectiveness of vaccines.
• Students are able to move in to residence without being vaccinated. Students are required to complete their full vaccination requirements by October 15, 2021, unless Residences has received their completed and signed attestation (along with any additional information/documentation as may be requested).
• Students are required to bring their proof of vaccination with them to Kingston and will be required to provide it upon request at and/or after move-in.
• Students who remain unvaccinated can expect, in the event of an outbreak, that they, upon the direction of KFLA Public Health, may be required to comply with additional measures, which could include moving to an isolation space.
